

Client's requirements

Mr Banister needed a professional company to first fix the entire system with short notice. He also required a company to lead the way and advise them what they should be installing as time was key.

Why they chose the Matters Group

Mr Banister's company Thomas & Wilson had previously worked together with The Matters Group on a new build in Chalfont St Giles and he was impressed at the speed and attentiveness to which our engineers worked.

Benefits to the Client

Because Mr Banister had very little time to design and get the Installation mobilised, he benefited from using Matters as we had the skills to take care of all his property service needs and advise on the quickest most cost-effective way forward.

Matters Group Solution

A site visit was promptly arranged where we liaised with the architect and our client on their specific requirements. Proposals and plans were quickly drawn up and agreed by the client while our engineers were on site starting the first fix.

- Full Intruder Alarm Installation.
- HDTV and Audio Distribution.
- Hard Wired Data Network (providing full coverage internet access).

"I was in a rush to catch up with my programme of works so I drafted in The Matters team to take care of things. The entire process from start to finish required very little involvement from me which was a god send, it allowed me more time to deal with other areas of the project that needed more direction from me."
